

Daily Progress Update – May 15, 2025

✓ Functional Enhancements

- **Clickable Job Titles**
Job titles are now displayed as clickable hyperlinks in the dashboard, directing users to the original job listing pages for quick access and application.
- **Company Logos Integration**
Each job listing displays the associated company logo, enhancing visual clarity and brand recognition. Logos are pulled from a `logo_url` field using services like Clearbit.
- **Unicode Handling Fix**
Resolved `UnicodeEncodeError` by removing emojis and enforcing UTF-8 safe encoding when exporting CSV files and rendering UI elements.

✓ UI/UX Improvements

- **Compact Input Layout**
Added a dual-column search input section above job results, enabling refined filtering by job title, skills, company, and location.
- **Streamlined Filtering Options**
Sidebar filters were maintained and tested, including employment type, remote/on-site preferences, company ratings, sponsorship status, and more.

✓ Branding

- **Project Logo Created**
A professional logo was generated for the "Smart Auto-Apply" project. It will be used in the dashboard header and final documentation for branding consistency.
