

VS Code interface showing a Python file named `app.py` in the `HEALTH_FITNESS` project. The code defines an asynchronous function `generatePlan()` and a synchronous function `displayPlan(planObj)`. The `generatePlan()` function sends a POST request to `/generate-plan` with user and fitness data. The `displayPlan()` function updates the DOM with the received plan data.

```
154 }
155
156 async function generatePlan(){
157     if(!userId) { alert("Login first!"); return; }
158     const display = document.getElementById('planDisplay');
159     display.innerHTML = "Generating plan...";
160     const res = await fetch('/generate-plan',{ method:'POST', headers:{'Content-Type':'application/json'}, body: JSON.stringify({
161         user_id: userId,
162         goal: document.getElementById('goal').value,
163         fitness_level: document.getElementById('fitness_level').value,
164         workout_days: parseInt(document.getElementById('workout_days').value)
165     })));
166     const data = await res.json();
167     displayPlan(data.plan);
168     currentPlan = data.plan;
169 }
170
171 function displayPlan(planObj){
172     const display = document.getElementById('planDisplay');
173     display.innerHTML = '';
174     if(planObj.workout_plan){
175         for(let day in planObj.workout_plan){
176             const card = document.createElement('div');
177             card.innerHTML = planObj.workout_plan[day];
178             display.appendChild(card);
179         }
180     }
181 }
```

The terminal shows the command `python` being executed in the project directory. The output indicates that Python 3.12.3 is running, but a `NameError` occurs because the variable `app` is not defined in the current scope.

```
PS C:\Users\kasuh\Desktop\health_fitness> python
Python 3.12.3 (tags/v3.12.3:f6650f9, Apr 9 2024, 14:05:25) [MSC v.1938 64 bit (AMD64)] on win32
